SUMMARY

Full stack web developer with five years building WordPress and WooCommerce sites for US and Australian businesses. I take projects from Figma to launch with custom themes, payments, shipping, hosting, DNS, and the technical SEO that gets them ranking. Most of my recent work is rebuilding slow page-builder sites as custom coded WordPress and fixing the Core Web Vitals along the way.

CORE TECHNICAL SKILLS

- **WordPress:** custom themes and plugins, ACF Pro, WooCommerce, multisite, Elementor, Divi
 - **Frontend:** JavaScript (ES6+), React, Next.js, Tailwind CSS, SCSS, Vite
 - **Backend:** PHP, Laravel, MySQL, REST API, GraphQL
 - **E-commerce:** WooCommerce, CyberSource, Airwallex, TNT, Mainfreight, Freightcom
 - **SEO and analytics:** technical SEO, Core Web Vitals, JSON-LD schema, Google Analytics 4, Google Tag Manager, Google Search Console, Google Ads, Microsoft Clarity
 - **Hosting and infra:** Kinsta, WP Engine, Cloudflare, Google Cloud, Docker
 - **Automation:** HubSpot, Zapier, n8n, local LLM hosting, chatbot integrations
-

WORK EXPERIENCE

Nexus Trade Group Pte. Ltd. (Australia) - Senior WordPress Developer

January 2026 - Present

Sole developer for the group's three e-commerce brands: Ozcut Abrasives (rebranding to Ozcut Welding Tables), Tenaxis Tables, and The Full Grip. Built or rebuilt all three from the designer's Figma files on a shared custom stack, replacing their Elementor sites with custom coded WordPress.

- Built Tenaxis Tables from the ground up: custom theme, ACF Pro, WooCommerce, multisite with three subsites. Its quotation request system now runs on all three brands.
- Migrated The Full Grip off Elementor to a fully custom theme. Multisite, four sites total, no page builder left in the stack.
- Rebuilt Ozcut Abrasives after taking over checkout fixes and PageSpeed work on the legacy site.
- Worked directly with the group's designer, translating Figma files into reusable ACF Pro components and flagging layout issues before build instead of patching them after.
- Wired up payments and freight per brand: CyberSource and TNT across two sites, Airwallex and Freightcom on The Full Grip, split TNT/Mainfreight routing on Ozcut so welding tables ship on the heavy goods carrier.
- Standardised the stack with ACF Pro theming, Kinsta hosting, and Cloudflare DNS so all three run the same way and shared components carry between them.

NuroSparX - Co-founder and Lead Developer

July 2025 - December 2025

Web agency I co-founded with NuVision Auto Glass's vice manager, running alongside my NuVision role. I was the technical lead for a small team of developers and freelancers building sites for US clients including Integrate IQ (HubSpot Diamond Partner), United Law, and Hygeia Health.

- Set technical direction for Integrate IQ and United Law: site migrations, directory listings, API integrations, Google Ads conversion tracking, and GTM pixels for the paid campaigns.
- Built a modular WordPress framework on ACF Pro with automated schema output so new client sites reused the same components instead of starting from zero.

- Managed the dev team and freelancers. Enforced semantic HTML and a QA pass before shipping.
- Automated data entry and content updates with Zapier and AI tools for the marketing team.
- Built a Filevine API integration for the legal clients plus a live HubSpot sync for forms and the CRM.

NuVision Auto Glass - Lead Web Developer

April 2025 - December 2025

Rebuilt the company's WordPress site and ran organic growth for its Arizona, Florida, and South Carolina locations.

- Rebuilt the legacy site. Load time 7s to 1s, Lighthouse 30 to 95.
- Built programmatic City + Service landing pages for the multi-state rollout. Lead volume went up roughly 30%.
- Set up GA4, GTM, and custom event tracking, then reworked the lead forms based on what the funnel data showed.
- Automated Google review pulls so live reviews showed on location pages.
- Mentored two junior developers and trained the sales team on basic on-page SEO.
- Put monitoring and backup recovery in place ahead of the high-traffic ad campaigns.

America Energy Partners - Web Developer (Elementor)

August 2024 - January 2025

Built a WordPress site for a renewable energy company on a tight marketing deadline.

- Designed the layouts in Figma and built them in Elementor Pro.
- Built reusable global widgets and templates so new service and landing pages stayed consistent.
- Kept the Elementor DOM shallow and asset loading lean so the builder didn't tank page speed.

SkinABCs Skincare - Full Stack Developer

April 2023 - May 2024

Built the company's e-commerce site and a companion mobile app for orders and tracking.

- Set up the whole stack: server config, WooCommerce, payment gateways, and the technical SEO.
- Wrote a custom WooCommerce theme and A/B tested a one-step checkout against the default two-step. Cart abandonment dropped about 15%.
- Added automated Product and Review schema so a few hundred SKUs were rich-snippet eligible.
- Cut frontend assets and cleaned up the slow DB queries. Product pages loaded below 2 seconds.
- Built a React Native app on the WooCommerce REST API so orders can be tracked from the phone.

TQ Travel Solutions - Web Designer

July 2022 - February 2023

Designed and built the travel agency's website and its marketing assets.

- Designed and shipped the full site, alongside creating their banners and video ads in Photoshop, Canva, and Premiere Pro for the agency's social and paid campaigns.

Oikos Technologies - Laravel Full Stack Developer

July 2021 - May 2022

Built the backend for a school management system.

- Designed the Laravel and MySQL web system for student and faculty records.
- Wrote Python scripts to batch admin data processing that staff had been doing by hand.

EDUCATION

Polytechnic University of the Philippines

2020 - 2024

Bachelor of Science in Computer Engineering
